FRIDAY SEPTEMBER 26 1941

NUMBER 23

Canada At War

Article Number Two
"THE ARMY"

By B. M. P.

The tour of Eastern Canada arranged by the Department of National Defence for Canadian editors, while covering every branch of Canada's war enterprise, concentrated especially on the Army.

We visited the Basic Training Centre at Brantford the Army Trades School at Hamilton, the General Motors proving ground for army vehicles near Oshawa, the great military encampments and Advanced Training Centres at Camp Borden, Petawawa, Valcartier and Debert and the Officers' Training Centre at Brockville.

We saw the raw recruit with only a few days' training in army life behind him and the young soldier-student being taught the art of a skilled tradesman. We were impressed with the fact that the classroom plays fully as important a part in this war as does the drill hall and the rifle range, while the great army of instructors are performing a service as vital as that of officers on the battle field. Later we came to the more advanced trainees engaged in rifle drill machine gun tactics, mortar-firing demonstrations and manoeuvres, going through their pace with machine-like precision. We were given every opportunity to talk with officers and men. Almost without exception we found them keenly interested in their work and eager to get on with the job of mastering the complicated arms and machines placed at their disposal.

Canadian Blitz

Above all, we were amazed at the tremendous hitting power of the modern mechanized and swiftly-moving army. We had a preview of Canada's new war machines at the General Motors' proving ground in the wilds of Eastern Ontario, where speedy blitz buggies vied with tracked or armoured fighting vehicles and troop or load-carrying utility trucks for the honour of climbing the steepest hill or travelling over the roughest ground. Down the side of precipitous slopes, through deep gullies and over sharp projections in the landscape went the bouncing bounding vehicles surmounting every difficulty with apparent ease. It was not so easy on the drivers and crews as some editors found to their sorrow when they essayed a ride in one of the new fighting machines. But it was a revelation of the progress made by Canada's motor industry in meeting the demands of modern war.

The Armoured Corps

At Camp Borden we witnessed another demonstration of the mechanical prowess of Canada's army when we watched a motor company swing into action with its motorcycles reconnaissance cars, universal carriers and utility trucks. Their skill in occupying a position and their apparent wealth of fire power were a revelation. At the same camp we viewed an impressive platoon attack on an "enemy" position, with machine guns and rifles covering the advance with a hail of metal and with smoke bombs providing a screen for the attack. At Borden is located the 5th Canadian (Armoured) Division under Major-General E. W. Sanson, D.S.O., who accompanied us on our tour of

NEWS NOTES

Mr. and Mrs. Alwyn Stone have moved to Picture Butte to make their home.

Geo. H. Brewerton spent part of the week in Calgary on business. He left Monday evening.

The bright sunshine was very welcome Thursday morning after the frost of the night and the snow storm of Wednesday.

the camp. For training purposes a number of old United States tanks had been obtained and these were greatly in evidence during the afternoon. The have proved most useful in training personnel in driving and maintenance. With Canada's newly-equipped tank factories speeding up production, it will not be long before Canadian-made modern tanks will be available for this Division.

Camp Petawawa

Camp Petawawa was famous in the last war for turning out some of the best artillerymen and engineers found in any army. It is fitting that in these days of mechanical warfare, Petawawa should again be the locale for training of Canada's artillery and engineering corps. The editors were treated to an astonishing display of gun drill by the young artillerymen both on the 18-pounder and the new 25-pounder, which will soon be the standard equipment. A firing demonstration by two batteries of howitzers and 18-pounders out on the ranges, indicated that the Canadian gunners have lost none of the skill and accuracy possessed by their forefathers. The engineers gave an effective show in demolishing trees and a crossroads with high explosive while a body-rop medley-drama proved a masterpiece.

Camp Debert

An entire article could be devoted to that other great military camp at Debert in Nova Scotia. A year ago a wilderness, today a veritable city with 30 miles of roadways, 422 permanent and 82 temporary buildings plus fire stations, banks, telegraph offices and all the other requirements of a great army. It is recorded that authority was granted to construct Camp Debert on August 7th, 1940. The first battalion moved in the latter part of October and by Christmas there were 12,000 men housed in the camp. The forest had been cleared, roads built water and power systems installed and buildings erected, an achievement that constitutes a miracle of engineering and stands as a tribute to the enterprise and efficiency of the Engineer Services Branch of the Canadian Army. The editors' party were at Debert for only two or three hours, but in that time were treated to several remarkable demonstrations. We watched with amazement as Universal carriers crashed through the sturdy saplings of Nova Scotia forests with evident ease; we saw the most skillful use of camouflage by troops in tactical exercise so deceiving indeed that it was impossible to detect men in the open only fifty yards distant; and we witnessed Bren gun, 3-inch mortar, and artillery firing that again testified to the hitting strength of this new army in the making.

Continued next week

Donald McMullin Accident Victim

Donald, 18 year old son of Mr. and Mrs. W. W. McMullin, met almost instant death on Monday morning about 11 a.m. while working at the local Canadian Sugar Factories plant, assisting the crane operator, Frank W. Leavitt in unloading time rock ready for the start of the campaign.

Details are lacking, and it is doubtful if there are any who know just what happened. The shovel had been stopped, with the bucket suspended in the air, while the engineer, Frank Leavitt put some coal on the fire to carry on the work. For the first time in the years he had operated the locomotive engine, the clutch slipped and let the bucket fall, and when it fell, it caught the unfortunate boy in the back, knocking him down and crushing the life out of him. He lived about 30 minutes after the accident.

The police were notified, and Constable Tallon from Magrath was soon on the job and assembled the following coroners jury: W. C. Stone, foreman, Lowell T. Court, Robert J. Webster, Arthur Pope, R. D. Nilsson and Wm. H. Fairbanks. The jury viewed the body so that it could be released for burial and were dismissed for one week when the actual hearing of the case will take place.

There are many stories of what happened, but as far as we have been able to learn the main details were as stated. Also there may be discrepancies in them. It is very sad indeed, and the deepest sympathy of the community is extended to the parents and brothers and sisters in their bereavement. Donald was a promising young man, and like his parents and the remainder of the family, was talented and active in musical activities. Besides his parents the following brothers and sisters survive: Robert and Nolan, Mrs. Dick O'Brien of Picture Butte, Mrs. Fred Turner, and Miss Dolores.

FUNERAL SERVICES

Funeral services over the remains of Donald McMullin, brothers and sisters in their 18 year old son of Mr. and Mrs. sudden and sad bereavement.

Farmers Urged Not To Thresh Damp Grain

Farmers of Alberta were urged to avoid losses which might be incurred by threshing their grain before it is properly dried, in a statement issued today by J. R. Sweeney, Deputy Minister of Agriculture.

The statement reads: "Reports have reached this Department that, owing to unfavourable weather conditions, grain is sprouting in the stock and in the swath. In many districts, lower grades will result from these conditions, and losses will be unavoidable. Alberta farmers are urged to use the greatest care in having grain mature before commencing to thresh.

"If threshing is resumed before the grain is dry, further losses will be experienced with heated grain in the bins or at elevators. Farmers cannot handle heated grain on the farm without sustaining heavy

losses and the lack of elevator space this year makes it impossible to handle any large volume of damp grain at country elevators or terminals."

Farmers who are in doubt as to whether their grain is ready to thresh may obtain tests at local elevators to show the moisture content and whether the time is opportune to thresh.

Mr. and Mrs. R. S. O'Brien of Picture Butte were Raymond visitors Thursday for the funeral of Donald McMullin.

Mrs. Ellen Smith, of Barnwell sister of Mrs. Bill Zobel spent part of last week with her sister and friends in Raymond.

Don H. Wall, now living in Salem, Oregon, and Bishop of the ward there, spent the week in Raymond and district looking after his interests here.

Beet Digging Under Way

BATTERY BOOSTER AT KING MOTORS

One of the latest equipment installations at King Motors is their Foreman Battery Booster a machine that charges your battery in 40 minutes time without removing it from the car, or loosening any connections. A compact motor and generator, the motor working off a 110 volt circuit, the machine can be wheeled any place in the garage and hooked onto a battery, the timer set, and other the battery charges, and when work can be carried on while the forty minutes elapses the motor cuts out the charger stops and the battery checked again.

Gauges on the machine tell the exact condition of your battery before the charge is started, and if it doesn't need charging, you know it as soon as the gauge is hooked on. If it does, need one, the charger is started, and while you buy your cheese and prunes the battery charges and is ready for you when you get back. Take a look at it next time you are in the garage.

NEWS NOTES

Orson Daines, Manager of the Park Theatre in Magrath was a Raymond visitor on Wednesday.

Mr. and Mrs. Wit Hague of Picture Butte were Sunday visitors in Raymond with relatives and friends.

Mr. and Mrs. DeVoe Matkin of Cardston district spent Sunday with relatives and friends in Raymond.

Mr. and Mrs. DeVere Hunt of Cardston moved into part of Mrs. M. W. Boyson's home for the fall, while DeVere is working in the Sugar Factory.

Jos. McLean had the misfortune to break a few ribs at the Factory Wednesday afternoon, and is off work for a day or two.

A picture of the 6th Field Park Co., R.C.E., is in the window of the A & T Shop. It was taken recently in Camp Petawawa, and you will be interested in picking out the Raymond boys in the picture.

Relatives received word over the week end of twins, a boy and girl, being born to Mrs. Mildred Galbraith Anderson in Provo, Utah, on September 20th and according to the letter, the parents are plenty proud of the new arrivals. Mother and babies are doing fine, and we say "Congratulations."

History will search in vain for reports more conflicting than those that come daily from the Russian and German high commands in their official communiques. We wonder why the truth cannot be at least approached. There may be some benefit in a good story but surely no people are such dunces that armies, as nearly equal in equipment and condition as these now fighting could continue day after day without some setbacks and temporary derangement of plans. In fact it may make people more conscious of the need of support and all out aid if more of the truth were told.

After a long stretch of cloudy weather during which grain fields dried slowly, the skies cleared Saturday night, and the first of the week the sun was shining in all its brightness, a south west breeze was blowing, and grain was really dry enough for threshing and was being threshed, combines and threshers running in all directions even on Sunday to get the grain harvest finished before more storm.

Beet digging started in a few fields Sunday when the plows were running and some topping evidently done, for the first load of beets, on the truck of Alex Nemeth arrived at the Factory scales at 6:30 half an hour before the scales opened, to be the first one to deliver beets from the 1941 crop, and at twelve noon, according to Agricultural Superintendent F. R. Taylor, 33 loads had been received at the scales in Raymond. Many farmers started digging Monday and as the harvest goes on the tempo of delivery will increase, and likely, despite the rapid scales and the improved unloading facilities at the Factory sheds, long lines of team and trucks will wait again to unload.

Raymond's factory is starting today and a good tonnage of beets is in the sheds for the start. Picture Butte commenced slicing yesterday, and a number from the local mill were in the northern town for the start of the campaign there. Weather during digging will make some difference on the delivered tonnage, but present expectations are that this year's crop will again pass the 300,000 ton mark.

The storm on Wednesday brought quite an influx of High School boys in to attend until the weather permits work to start again.

Schools Are Open Again

Raymond's Public and High Schools started again Monday after a holiday of eleven weeks, three weeks being added to the vacation period because of the polio ban.

Enrollment in the beginner's grades was not quite as heavy this year as has been the case for several years past, and all registrations within the age limit were taken care of. In the other public school rooms, enrollment as about normal, but in the High School grades, it was left largely to the girls to uphold the honor of the town in enrollments as the boys old enough to work in the fields are busy assisting in the work which because of the wet weather, has piled up greatly, and grain harvest, the third cutting of alfalfa and beet digging all going on at the same time. There seems to be labor enough to meet the demand and everything is sailing along smoothly.

Members of the Dominion and Provincial Water Storage Committee visited Southern Alberta over the week-end and on Sunday were at the proposed river near Spring Coulee and al dam site on the St. Mary's so visited the proposed reservoir sites here and near Magrath. We hope their report will be favorable. Additional water storage over this district would make it a paradise of production.

S. I. MAY Editor.

ARE WE DOING OUR PART?

Every loyal Canadian might ask himself seriously and conscientiously if he or she as the case might be, is doing all that can be reasonably expected to aid the war effort.

Every Canadian knows, or should know by now, that the enemies of freedom and democracy are heartless and merciless and taskmasters. Human life means nothing to them at all. They have one desire to be masters of the world. The sacrifice of a few million more human souls is nothing to them if it will aid in their evil purpose. Reports now state that wounded soldiers, wounded beyond recovery are being killed instead of cured for and treated as long as life lasts in their bodies.

In view of these things, we should bestir ourselves. Being passively grateful for our safety and security is fine, but is insufficient. We should be actively grateful, and there are none who cannot show their gratitude in a tangible way. We have a war to be won on the financial front. Millions of Canadians have pledged War Savings Certificates regularly for this conflict. Are we all doing our share? If not, can we do better in the future? Our boys are guarding Britain's shores from the enemy. Are we going to let them down by failing to provide the means of war to keep them going.

Then there is another front, mainly production. Situated as we are, possibly our contribu-

tion in this latter field will have more far fetched effect than any other. Britain calls for more bacon, more butter, more cheese more eggs, more everything. We in western Canada are in the cradle of production. What are we doing to assist in this phase of the conflict? Are we milking more cows feeding more hogs, caring for more chickens? Or, if we have not increased in these fields, are we taking better care of what we have and trying to increase production to the maximum? If our English cousins want an extra egg for breakfast let's see that they have it. British courage is and has been the wonder of the world. Possibly full British stomachs has contributed more to this happy state than even the Britishers themselves realize. Let us in Canada see that cupboards are kept full so long as there is the wherewithal in Canada and in our soil to keep them full.

We are not fighting for or against communism or any other -ism. We are fighting for freedom and we can never cease until freedom is won. Let us to the task in real earnest and do our full part as real Britishers to see that the flag of freedom shall always wave over the land of the free and the home of the brave.

Phone us your news items. If we're not at 24 we will be at 30. Give us a buzz while you think about it.—The Recorder.

Loren Larson and Bert Nilsson were in the Manyberries district last week buying feeder cattle, a shipment of which arrived here by freight Saturday afternoon. These cattle will go on feed now for spring sale.

Stores had a busy Monday as with books, clothing and shoes children were being outfitted for the school year. From the throngs in most business houses merchant can chalk up a good days business.

THE UNPROFITABLE BOARDER IN THE POULTRY FLOCK

(Experimental Farms News)

Every poultryman has to face the problem of keeping the flock on a profitable basis at this season of the year. Many birds may cease to lay while others continue in production under the same feeding conditions.

In order to keep the non-layers down to the lowest number it is advisable to cull thoroughly and remove all the birds that are unprofitable boarders, says W. T. Scott, Head Poultryman, Dominion Experimental Station, Harrow, Ontario.

Summer culling is easy, as most birds capable of laying a profitable number of eggs thru out the year are still in production at this season. Those that are not laying are doubtful performers and should be handled and examined. Only by so doing can a definite opinion be formed of body condition, and unless the birds carry a fair amount of flesh they will not continue to lay throughout the year. Thin breasted birds and those in poor feather, should be removed from the flock.

It is unlikely that the good layer of the yellow skin breed will possess much pigment at this season; that is, the yellow colour in beak, skin and legs will have mostly disappeared. The attractive bird showing much new feather and with bright yellow legs and beak should come under suspicion as of poor laying ability. Those that cast their feathers early in the season are nearly always poor layers.

Eggs are going to be in great demand and every effort should be made to keep the flock in profitable production. The mash hoppers should be kept filled with a good, balanced ration in which the meat and fish meal should form fifteen to twenty per cent of the whole

contents. Scratch grains should not be fed too heavily, or the consumption of mash will be less than is necessary to keep up production.

It may be advisable to feed a little of the usual mash slightly moistened with skim milk or buttermilk and it is well to remember that the whole flock may be thrown out of production at this season by the lack of clean, cool water or succulent green feed or the presence of mites or lice.

Two small ships carrying Norwegian felling to England, were sunk by German fliers outside Bergen harbor. And this is war in the present enlightened age.

The Elementary Flying Train ing School at High River, which was formerly located at Lethbridge, was officially opened on Tuesday when Air Marshall Garrod, was present and took charge. A number of former Lethbridge fliers are on the staff at the new school. Work on the Bombing school at Kenyon Field Lethbridge is progressing rapidly and this school, second largest of its type in Canada, will be opened if present plans carry thru, on October 13th.

Agriculture the "Poor Relation"

1. That the initial payment by the Wheat Board should be increased to \$1 a bushel for One Northern wheat at the terminal.
2. That the stocks of wheat represented by the carryover as at July 31st, 1941, should be taken off the market and held as a national emergency war reserve.
3. That, as from August 1st, 1941, all sales of wheat should be credited to the crop year 1941-42.
4. That the crop year 1941-42 should be declared an emergency year under the terms of the Prairie Farm Assistance Act, irrespective of market prices prevailing.

The above four requests were made by a delegation, representing the western Wheat Pools, which, on August 9th, interviewed the Wheat Committee of the Federal Government.

The delegation pointed out that principally because of the short crop, the farm revenue from wheat produced in Manitoba, Saskatchewan and Alberta will be approximately \$90 million less than last year and this in the face of continually rising farm costs.

The delegation compared the government's wartime wage policy with its agricultural policy. From the government's viewpoint wage rates are fair and reasonable if they are as high as the highest rates paid between 1926 and December 16th, 1940. If farmers were treated on the same basis, the prices of grains would be as follows:

Wheat, per buhel	\$1.60
Oats, per bushel	.69
Barley, per bushel	.90
Rye, per bushel	1.35
Flax, per bushel	3.00

If Canadian unity is to be maintained, the Wheat Pool memorandum pointed out and we are to reach our maximum effort in the successful prosecution of the war, the great disparity between agricultural

and labor policy must be eliminated. "We would urge upon the Government of Canada that the farm producers who form such a large part of our population, should not be regarded as the "poor relation" of the Canadian family, and that it is in the national interest that steps should be taken to place the living standard of those engaged in farming on a basis commensurate with the rest of the country.

"We realize fully the necessity of maintaining our war industries at the highest possible pitch of efficiency, and that in order to reach this workers should enjoy fair and reasonable wage rates. We know of no foundation upon which the principle can be established that agriculture should continue to produce food supplies at prices below the cost of production in order that other groups of our population, which are already protected by cost of living bonus regulations, should enjoy a lower cost of living at the expense of agriculture.

"In this memorandum we have not tried to emphasize the unrest, dissatisfaction and anxiety now prevailing in the western provinces, largely as a result of lack of adequate farm revenue to maintain reasonable living conditions. At the same time we would like to emphasize that, in spite of conditions at present prevailing, there are neither strikes nor lockouts in the agricultural industry."

Wheat producers of Alberta should clearly understand what is being done to help their cause. Their organizations can go so far. Further progress can be made only by the whole-hearted and energetic support of the whole body of farmers.

Alberta Pool Elevators

LaMaun Burton of Cardston is here to help his uncle Don Rodeback with the beet harvest. LaMaun is or has been Linotype operator on the Cardston News staff, but his health demands outside labor and he is going to try the beets.

Quite a number of Indians have come into the town the past week looking for work in the grain or beet fields. With the Factory starting, it is quite likely that many of these men will be taken on threshing rigs with their teams to finish up the grain harvest when the fields get dry.

WEEKLY LETTER

PESTS OF POULTRY

Two insidious pests, Hitler and Mussolini have caused and are causing us much worry and sorrow and we are up in arms against them. Two other pests cause the poultry producers of Canada great losses every year and all too many do nothing about it. Lice and mites are Hitler and Mussolini of the poultry flock and probably reduce egg production as much as any other single factor. Their control will materially step up production and help meet the present requirements of more eggs for Britain.

Mites are especially troublesome during the summer months when the hot weather is particularly conducive to their development. They hide in cracks around the roosts during the day and then make "blitzkrieg" raids on the birds at night. Control is simple. Cleanliness is the first essential and

then the roosts and their supports must be thoroughly treated with a mite killer. Wood preservatives, nicotine sulphate or coal tar dips (in 10 p.c. solution) are all effective. Crank case oil diluted with kerosene is also an effective remedy. The solutions should penetrate all cracks as well as cover all surfaces in the roosting area and the treatment should be applied at intervals of 7 to 10 days until complete eradication has been obtained.

Live lice on the birds and treatment must take this into account. The simplest treatment for lice is to paint the roosts with nicotine sulphate just before the birds go to roost. The warmth from the birds liberates the fumes from the nicotine sulphate and the lice are effectively gassed. The treatment should be repeated after the elapse of 10 days to destroy the lice that have hatched during the interval. Two or three treatments should effectively control, and possibly eradicate

the parasites. However, the birds should be examined periodically in order to detect any re-infestation that may occur.

Eradication of these two external parasites will help keep the birds comfortable, happy, and in high productive condition. The birds will do their part in stepping up production if their owners will give them a hand. Let us wage a war on lice and mites and thus aid in the war on the Nazis.

AMERICAN FARMING TRENDS

By Haydn S. Pearson
In Christian Science Monitor
In 1790, there were 4,000,000 people in the United States and 90 per cent were classified as rural; today there are more than 132,000,000 and about 25 per cent are on the 6,600,000 farms of the nation.

Certain definite trends have manifest themselves in recent years. First in importance perhaps from the viewpoint of national implications is the mechanization of farm power. In 1920, there were about 20 million horses and mules on farms; today there are between 15 and 16 millions. There were 160,000 tractors in use in 1919; today there is 1,600,000. In the past two years, the great farm machinery companies have been turning out small inexpensive tractors for the one man, family-sized farms. Experts figure that, for the nation as a whole, it requires between three and four acres to support each horse and mule. Thus annually, more acres are made available to production for other purposes by the use of mechanical power.

Second, for the nation as a whole, the trend is toward larger-sized farming units. This trend is most noticeable in the great agricultural regions of the middlewest, northwest, and the southwest. Three in seven farms in the United States now are rented, leased, or share-cropped, and more and more of these are under supervision of a manager or central controlling agency. This is a far cry from the philosophy of Jefferson who believed that the backbone of a democracy was a farming class with small, individually owned farms. Undoubtedly, in one respect larger units make for more efficient production. But this is not the great need today.

A third trend of national importance is the diversification program in the southern states. Through encouragement by the national, state and local authorities farm families are growing food crops for a cash income. Cotton is still king, but the trend is definitely toward a better balanced and more stable way of farm living. On the family-sized farms, all over the country as well as in the south farmers are realizing that farming should provide a well balanced living for families and livestock. A one crop farm operation is not satisfactory except in special situations.

Fourth, federal regulation of the major products will probably become an accepted part of the national agricultural economy. Changed world conditions demand some type of over all control. In 1919, for example,

NEWS NOTES

Snow again today will hold up beet digging and grain harvest indefinitely. There is a cold breeze from the north.

The Factory staff laid off work Thursday afternoon to attend the funeral of Donald McMullin who was accidentally killed there Monday forenoon.

Two fliers were killed at Suffield, Alta., when their plane from the Medicine Hat Flying School crashed near there. No names were given.

The World Series Baseball games, between the Brooklyn Dodgers and the New York Yankees opens on Wednesday, October 1st, according to announcement of Kenesaw M. Landis, Baseball Commissioner of the two big leagues.

The Brotherhood of Carpenters and Joiners in Calgary have asked a wage of \$1.00 an hour and free transportation from and to work when working away from home. They have pledged 100 p.c. support to the Dominion in its war effort if their requests are met.

Fall bulbs and shrubs are now being listed. It seems too bad to see lovely beds of still blooming flowers destroyed to make room for these plantings. Such is life, when a thing's usefulness is over or nearly over, it must be uprooted to make room for something else.

The Genealogical Committee had charge of the Sunday evening meeting in the 2nd Ward and speakers were Miss Ina Jones, Mrs. L. L. Palmer, and Elders Isaac Holt and S. I. May on research work and Temple activity. Jos. McLenn sang the "Seer."

farmers received \$4,000,000,000 for exports; a decade and a half later the figure was \$590,000,000. There is no longer a world wide market for cereal grains, meats and cotton. The present war will not likely stimulate production agriculturally as it did in the first world war. Further more, federal planning and regulation will gradually extend over the vast ramifications of the whole subject of land economy. Conservation of all kinds forestry, and land planning are present-day trends.

Other trends include increased industrial uses of farm products. The use of plastics has barely begun what seems certain to be a thrilling industrial advance. Electricity is now used on 25 per cent of the farms of the country, and with accelerated speed this blessing is coming to rural areas. The co-operative movement for both buying and selling is making steady progress. There are now over 8,000 associations for marketing, serving over 2,000,000 members.

Fundamental to the present situation is a realization by both rural and urban dwellers that the social structure faces profound changes. There is a close interrelationship today between nations, between city and country. The human problems of rural life will be increasingly solved by unselfish, clear thinking and the constructive application of the benefits of research.—Wheat Pool Budget,

"Imagine it taking a war to set us right"

Husband: "There's one thing we can thank Hitler for. He's got us saving at last."

Wife: "Yes! Imagine! Until it became a positive duty we certainly never managed to put anything by each week."

Husband: "I think it's partly because these War Savings Certificates are so simple to buy."

Wife: "You mean the idea of getting the office to deduct a regular amount each week from your salary?"

Husband: "Yes! And how they're mounting up! Quite a nest-egg when you count the interest they're earning."

Wife: "Well the more the merrier, I say! There are lots of things we'll need the money for, as the years roll by!"

The help of every Canadian is needed for Victory. In these days of war the thoughtless selfish spender is a traitor to our war effort. A reduction in personal spending is now a vital necessity to relieve the pressure for goods, to enable more and more labour and materials to be diverted to winning the war. The all-out effort, which Canada must make, demands this self-denial of each of us.

SPEND LESS — TO BUY MORE WAR SAVINGS CERTIFICATES

Last Call Sept. 30

TO PAY YOUR 1941

Income Tax

on the Government Monthly Plan
YOU MUST START AT ONCE!!

Next TUESDAY will be the last opportunity to pay your 1941 Income Tax on the Government Monthly Plan. This gives you the privilege of paying in twelve monthly installments without interest, instead of by lump sum in March, 1942.

Here is how to get the monthly payment privilege! Divide the total of your 1941 income tax by twelve. This is your first payment — and must be paid to the RECEIVER GENERAL on or before SEPTEMBER 30, 1941. You will then pay the same amount before the end of each month for the balance of 1941. When you have estimated your 1941 income tax at the 1941 rate, you will deduct the four payments you will have already made, and pay the remainder in eight equal monthly installments, starting January, 1942.

The Government offers the above plan as the most reasonable and convenient method of meeting income tax obligations. Ask your local Income Tax Office for installment Income Tax Remittance Form—and any further information you may require.

G. W. G. GIBSON,
Minister of National Revenue

C. F. ELLIOTT,
Commissioner of Income Tax

VANCOUVER, B.C.

Today's traveller to Vancouver finds Hotel Grosvenor fits his or her needs best of all. Distinctly quiet and without a bar, you are assured a good night's rest. As you awake refreshed, you find the shopping business, financial & theatre districts right at the door. The rates are low commencing at \$1.50 and \$2.50—and the hotel and dining room service is excellent.

NOTICE

In the Estate of William Warren Depew Jr., late of Raymond in the Province of Alberta. Farmer deceased.

Notice is hereby given that all persons having claims upon the Estate of the above named WILLIAM WARREN DEPEW, Jr., who died on the 5th day of August A. D. 1935, are required to file with the undersigned by the 27th day of October, 1941 a full statement duly verified, of their claims and of any securities held by them, and that after that date the Administratrix will distribute the assets of the deceased among the parties entitled thereto having regard only to the claims of which notice has been so filed as which have been brought to her knowledge.

Dated this 24th day of September 1941

WARREN L. JONES,
Raymond, Alberta
Solicitor for Enid Lybbert Hans, Administratrix.

Cars were getting around again Thursday morning after laying up mostly on Wednesday while snow and mud held complete control of all roads except gravelled ones.

Congratulations to Grandfather Schneider, father of Paul and Otto, who celebrated his 94th birthday on Friday, September 29th and is still hale and hearty, getting about the farm without any trouble and really enjoying life.

FISH STORIES

The Creston Review comes along with another 'bear story.' It seems that two citizens of a nearby hamlet went fishing on Goat river. They met a bear with a fish in its mouth. The bear dropped the fish on encountering the men, and the two fishermen picked it up and brought it back to town, with the bruin's teeth marks to prove the story.

Listen, you B. C. boys and we'll tell you a real fish story.

When Eli Sandford was section foreman at Cassils he once went down to Lake Newell to fish. On the shore of the lake he saw a snake with a frog in its mouth. Of course Eli took the frog away for bait.

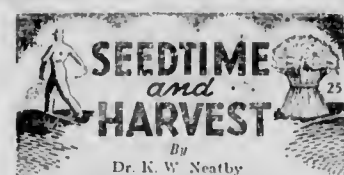

But being a compassionate soul Eli took a flask out of his hip pocket and put a couple of drops in the snake's mouth to recompense it for the loss of the frog.

Then Eli went on about his fishing. Suddenly he felt a tap against his leg and looking down he saw the snake with another frog in its mouth, holding it up to him.—The Brooks Bulletin.

The local standby plant took the Calgary Power circuits from Raymond south most of the day Sunday while a new switch was being installed at the airport in Lethbridge.

Living cost are up 12.8 per cent to what they were in August 1939 according to figures just released by the Statistics Board in Ottawa. Higher food prices is charged with 6.90 cents out of the 12.8 cent rise per dollar in costs.

... — "V" for Victory. Fly it where everyone can see it.

Dr. K. W. Neatby
Director, Agricultural Department
North-West Line Elevators Association

During the past four years thousands of young men and women in the prairie provinces have had an opportunity to take special courses in agriculture and domestic science through the Dominion-Provincial youth training programme. The programme will again operate this fall and winter, when similar courses will be held at rural centres in Manitoba, Saskatchewan and Alberta.

The youth training programme is financed jointly by the Dominion and Provincial Governments. Details of organization and arrangements for instruction are left to the Provincial authorities. Because of this, the procedure varies somewhat from province to province, but the general objective is the same. That is, to provide an opportunity for worthy and needy rural young men and women between the ages of about 16 and 30 years to attend courses of the kind mentioned above, in or near their own communities. The first schools of the season generally commence about November 1st. Applications for courses must be sent in by the communities interested. Before the application can be filed, naturally some preliminary organization work must be done so that the authorities can be assured of a certain minimum attendance, and a suitable building in which to conduct the course.

Applications for courses in Manitoba, Saskatchewan and Alberta should be sent to, and more complete details of the courses offered and the arrangements which are to be made by the local community may be secured from: Director, Extension Service, Manitoba Department of Agriculture, Winnipeg; Director, Department of Extension, University of Saskatchewan, Saskatoon; Director, Department of Extension, University of Alberta, Edmonton.
